RIGHTS

Exclusive: WORLD

Bangladesh shows how to adapt, innovate and live in a world affected by climate change.

‘A frank and engaging account of Bangladesh's environment and development past and present, this important new book challenges the passive portrayal of countries of the Global South and critiques the unhelpful ways they have been acted upon by international “experts”. A highly readable and carefully researched account for everyone interested in the local and global dilemmas posed by climate change.’ –David Lewis, Professor of Social Policy and Development, London School of Economics and Political Science, UK

‘A valuable interpretation of climate change stresses in Bangladesh, emphasizing coping, resilience and innovation in the fragile delta. Past successes are acknowledged; myths are confronted; and ongoing challenges for problem solving, such as poor governance, corruption and unplanned megacities, are noted. A must read for policy leaders, activists and practitioners wrestling with this global threat. –Geof Wood, Emeritus Professor of International Development, University of Bath, UK

Severely threatened by climate change, Bangladesh is showing the world how to take an active role in adapting to this situation. Learning from its own experience in coping with floods and cyclones, Bangladesh is taking the lead in international climate change negotiations and attempting to persuade the industrialized world to curb emissions.

Contents

1. Actors, not victims; 2. How will climate change hit Bangladesh; 3. Taking the lead in negotiations – and moving forward; 4. Sea level rise and the vulnerable coast, where farmers know more than engineers; 5. Saving lives with cyclone shelters; 6. Living with floods; 7. Agronomists keeping ahead of climate change; 8. No climate change migrants – yet; 9. How can the privatised megacity cope with climate change?; 10. Is climate change only a problem for the urban poor?; 11. Power – political, financial and electrical; 12. The front line of climate change; Index.
