Description

Examines why Asia needs inclusive growth, what policy ingredients an inclusive growth strategy entails, and how such a strategy can lead to benefits of growth being more equitably shared.

'This book is a thoughtful and scholarly presentation of the issues and solutions, and offers a way through the policy maze. It is a practical response to Asian "suffering," and a welcome balance to the growing number of books celebrating "shining" Asia.' —*Homi Kharas, Senior Fellow, Global Economy and Development, Wolfensohn Center for Development, Brookings Institution*

While Asia's growth record in recent decades is remarkable, it has been marred by rising inequalities. This book looks at recent trends of income and non-income inequalities in developing Asian countries, discusses their underlying driving forces, and examines key policy issues that need to be addressed to ensure that the benefits of growth will be more equitably shared in Asia. The book also presents a set of country studies that provide rich information on growth, poverty and inequality dynamics and the policy challenges that arise in marching toward inclusive growth.

Readership: Policy makers of both developing and developed countries; development economists, researchers, and practitioners; journalists interested in economic development in and outside Asia; undergraduate and graduate students specializing in development, development economics, international development, Asian development, or other related fields.
